EDUCATION

Northeastern University

M.S. in Computer Science

Sep 2025 – Apr 2028

Seattle, WA, USA

Tunghai University

B.A. in Industrial Design

Sep 2013 – Jun 2017

Taichung, Taiwan

PROFESSIONAL EXPERIENCE

Supertung Industrial Co., Ltd.

Overseas Procurement Specialist / Automation Developer

Mar 2019 – Mar 2025

Taichung, Taiwan

- Reduced monthly procurement data consolidation from 3 days to under 1 hour by developing and deploying an internal ERP integration tool across 15+ vendor export formats.
- Reduced inventory status inquiries by 40% by building an Apps Script-backed Google Sheets tracker with automated data refresh, lookup logic, and stock allocation calculations from ERP inventory and inbound shipment data.
- Sustained 22 containers of COVID-era imports (\$6M, roughly 1.8x a normal year) while holding warehouse utilization under 85%, by developing a Python capacity-planning model that joined purchase orders, ETA data, outbound commitments, and warehouse limits to generate predictive analytics across shipment schedules.

Brantabee Italia

Software Engineering Intern

Aug 2017 – Jan 2018

Corciano, Italy

- Developed a Spring Boot REST service that received RFID scan events, mapped each event to a product state change, and persisted RFID-driven inventory state transitions in PostgreSQL across 200+ smart wine dispensers.
- Designed idempotent REST APIs for an automated reorder system by enforcing uniqueness constraints at the database level, eliminating duplicate orders and reducing the duplicate-order rate from ~2% to near-zero.

PROJECTS

FlexLab Event Board | Deployed at Northeastern University FlexLab | [GitHub](#)

Feb 2026 – Jun 2026

- Built and deployed a touchscreen kiosk with four full-screen modes - workshop and training listings with in-app registration, a month calendar, and tool borrowing and returns - reading and writing 7 related Supabase tables directly over the PostgREST API.
- Modeled tool availability as a derived value (total quantity minus count of active borrows) instead of a stored counter, making borrow records the single source of truth so a failed write cannot leave a permanently wrong count that surfaces no error.
- Built a keyword-matched FAQ chatbot with quick-reply buttons and a staff-on-duty lookup, with staff schedule data synced from SharePoint Excel through Azure Logic Apps so non-technical staff edit shifts in a tool they already use rather than in the database.

Topic Voting Platform | Team Project | [GitHub](#)

Jan 2026 – Apr 2026

- Enforced separation of concerns across all 6 views by routing every business logic call through a single ApplicationController, keeping data retrieval and state management out of view classes so every business rule runs headless under 126 JUnit tests across 13 files, 39 of them on the controller alone.
- Enabled the same codebase to run offline or against a live backend without modification by designing a configurable data layer that routes requests to either local CSV repositories or a remote Spring Boot REST API.
- Enforced data integrity in ApplicationController by checking per-session vote history before each submission to block duplicate votes, and throwing a pre-condition exception before persisting any comment from a user who has not yet voted.

ERP Data Integration Tool | Collaborative Project (deployed internally)

Mar 2023 – Dec 2023

- Built a Python application (Tkinter, pandas) that consolidates 8+ ERP report types covering 1,000+ SKUs by auto-detecting header rows across inconsistent Excel layouts, mapping raw column names to 15 canonical fields using regex patterns, validating required fields and numeric types before processing, and outputting a consolidated multi-sheet Excel report with a skipped-file log for troubleshooting failed imports.
- Structured the pipeline into independent ingestion, transformation, and validation layers so that new ERP export formats can be onboarded by adding regex patterns only, with no changes required to transformation or validation logic.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Frameworks: Spring Boot, JavaFX, JUnit, pandas, PostgreSQL, Supabase/PostgREST, REST APIs, Tkinter, HTML, CSS

Cloud & Tools: AWS Certified AI Practitioner · Azure · Git · Google Apps Script
